## #字串移位python

```
CHAR = "APPLE" # input
SHIFT = -3 # moves' valus

RESULT = ""

# 甚麼方法可以為字串內的每一個字符作移位?
# 答:
for i in range(0,len(CHAR)):

ASCII=ord(CHAR[i]) - 65 # 把字符轉換成ASCII, 並把ASCII轉換成索引
ASCII=(ASCII + SHIFT)%26 # 把索引移位, 並用mod確保數值循環 0 - 25
RESULT+=chr(ASCII+65) # 把索引轉換成ASCII, 並把ASCII轉換成字符
```

# test:輸出應是 XMMIB print(RESULT)
